Hyderabad, India

Professional Summary

Full Stack Developer with 2.8+ years of experience building scalable web applications using React, TypeScript, Node.js, NestJS, and SQL/NoSQL databases. Experienced in developing frontend applications from Figma designs, integrating REST APIs, building reusable UI components, and implementing real-time systems using Socket.IO and WebRTC. Hands-on experience with authentication, payment workflows, relational data modeling, database transactions, concurrency-safe reservation flows, distributed real-time synchronization, and performance optimization, with experience collaborating across frontend and backend teams.

Core Competencies

React.js React Hooks TypeScript JavaScript Node.js NestJS REST APIs MongoDB PostgreSQL
Redux Toolkit Socket.IO WebRTC JWT Authentication Real-Time Systems System Design Fundamentals
CI/CD Debugging Performance Optimization

Technical Skills

Frontend Development: React.js, React Hooks, JavaScript (ES6+), TypeScript, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Material UI (MUI), ShadCN

State Management & Data Fetching: Redux, Redux Toolkit (RTK), RTK Query, Context API, React Query, Zustand

Backend Development: Node.js, Express.js, NestJS, RESTful APIs, JWT Authentication, Role-Based Access Control (RBAC), API Integration, Webhooks

Real-Time & Event-Driven Systems: Socket.IO, WebRTC, Server-Sent Events (SSE), Redis-Based Event Synchronization, Kafka

Databases, ORM & Caching: PostgreSQL, Prisma, MongoDB, Mongoose, SQL, Redis

Architecture & Design: System Design Fundamentals, API Design, Relational Data Modeling, Database Transactions, Concurrency Handling, Event-Driven Architecture, Caching Strategies, Scalability Concepts

Cloud & Infrastructure: Firebase (Auth, Firestore, Hosting), AWS (EC2, S3, IAM – Foundational)

API, Payments & Validation: GraphQL, Zod, Stripe, Payment Intents, Webhooks, Refund Workflows

DevOps & Tools: Docker, Docker Compose, CI/CD, Git, GitHub, VS Code, Postman

AI-Assisted Development Tools: GitHub Copilot, Claude Code, Cursor AI, Windsurf AI

Testing: Jest

Professional Experience

Software Engineer

Feb 2026 – Present

Kellton Tech Solutions — Hyderabad

Client/Project: IXIGO – AbhiBus Migration

- Worked on frontend application development and migration using React.js, TypeScript, ABRs-UI, and Tailwind CSS.
- Contributed to frontend architecture migration alongside evolving backend API changes.
- Collaborated closely with backend teams to align API contracts and frontend integration flows.
- Participated in technical discussions, clarified requirements, and proactively identified implementation gaps.
- Successfully completed the AbhiBus frontend migration project on May 5, 2026.

Client/Project: Rentokil – SPARTA

- Developing a multi-module web application from the ground up based on business requirements and Figma designs.
- Building reusable and maintainable frontend components using React.js, TypeScript, and Material UI (MUI).

- Translating Figma designs into responsive, production-ready user interfaces while maintaining consistency across modules.
- Collaborating with backend teams to integrate APIs and support end-to-end feature development.
- Participating in technical discussions and requirement clarification to identify implementation gaps early.

Associate Software Engineer – Full Stack Development

Nov 2023 – Dec 2025

InstaVC — Hyderabad

- Developed and maintained production web applications using React, Node.js, TypeScript, MongoDB, WebRTC, Socket.IO, and Firebase.
- Built and enhanced frontend modules while contributing to backend APIs and server-side development based on project requirements.
- Contributed to InMeet, a video conferencing platform, by developing real-time meeting and webinar features using WebRTC and Socket.IO.
- Contributed to E-Sanjeevani, a telemedicine platform, by implementing P2P video consultation and real-time language translation features.
- Participated in InLynk feature development and bug resolution to improve application reliability and user experience.
- Collaborated with cross-functional teams to troubleshoot issues, integrate APIs, and deliver production-ready features.

Teaching Assistant (Internship – MERN Stack)

Jan 2023 – Aug 2023

CCBP (NxtWave) — Remote

- Resolved 518+ technical queries and mentored 421+ learners in JavaScript, React, Node.js, and MongoDB.
- Reviewed code and guided learners on debugging, problem-solving, and development best practices.
- Recognized as “TA of the Week” (6x) and “TA of the Month” for consistent performance.
- Simplified real-world coding problems and helped learners improve their technical understanding.

Personal Project

SeatLock – Real-Time Movie Seat Booking & Reservation Platform

Technologies: React.js, TypeScript, NestJS, PostgreSQL, Prisma, Socket.IO, Redis, Kafka, Stripe, JWT, Docker, Tailwind CSS

- Developed a full-stack movie seat reservation platform using React, TypeScript, NestJS, PostgreSQL, and Prisma, with modular REST APIs for venues, screens, showtimes, seats, authentication, payments, and reservation workflows.
- Engineered concurrency-safe seat holding using database transactions, unique constraints, and server-side availability validation to prevent conflicting reservations during simultaneous booking attempts.
- Implemented real-time seat synchronization using Socket.IO and Redis across multiple NestJS instances, with showtime-specific rooms and event broadcasting to maintain consistent seat availability across connected clients without page refreshes.
- Integrated Stripe payments across frontend and backend with Payment Intents and webhook handling for pending, successful, failed, and refund payment workflows, and implemented Kafka-based event processing for asynchronous application events.
- Dockerized the React frontend and NestJS backend independently and orchestrated the complete application using Docker Compose with web, API, PostgreSQL, Redis, and Kafka services, validating the containerized application end-to-end.
- Implemented time-bound seat holds with automated cron-based expiration, JWT-protected booking operations, and relational data models for managing showtimes and showtime-specific seat availability.

Education

B.Tech (Mechanical Engineering) — Kakinada Institute of Technology and Science Jun 2019 – Apr 2022

Diploma (Mechanical Engineering) — Kakinada Institute of Technology and Science Jun 2016 – Apr 2019

Certifications

Industry Ready Certificate — NxtWave
